

## IE-GY 9113B — Capstone Storyboard & Deliverables Map

The 14 lessons mapped to the final board presentation. Each lesson's homework builds a piece of the final deck. Doubles as the deliverables-to-project map (every deliverable tagged to its origin: in-class / homework / lab).

| Lesson                                          | Phase (Milestone)  | In-class working focus                                                                                | Homework deliverable → capstone piece                                                            | Lab            | Feeds Board-Memo §            | Fills final-deck slide(s)         |

## Final Board Presentation — 13-slide skeleton (~20 min + 5 min Q&A)

~60–90 seconds per slide. Many lessons feed one slide — never one slide per lesson. Slide count mirrors the 7 Board-Memo sections so the deck and the memo carry the same argument.

| Slide | Section                     | What it argues                                                                               | Fed by (lessons/labs) | Phase     |
|-------|-----------------------------|----------------------------------------------------------------------------------------------|-----------------------|-----------|
| S1    | Title & company             | Company, team, and the one-line transformation thesis.                                       | W1, W14               | Frame     |
| S2    | Executive summary / the ask | What the company has, what it needs, the three-phase path, the investment ask. Written last. | All labs · W11+       | Frame     |
| S3    | Context & backbone          | Current integration stack, archetype, primary thread.                                        | W1                    | Diagnose  |
| S4    | The strategic problem       | Where the backbone fails to leverage — the value at stake.                                   | W2                    | Diagnose  |
| S5    | Backbone diagnosis          | Process map; control + decision points; friction chain; the board-level consequence.         | Lab 1                 | Diagnose  |
| S6    | Automation opportunity      | The best RPA candidates — where automation adds value.                                       | W4 · Lab 2            | Diagnose  |
| S7    | Automation journey          | Working automation + CoE/operating model + simple ROI.                                       | W5 · Lab 2            | Diagnose  |
| S8    | Agent design                | SPAR architecture, tools, and the step that needs AI judgment.                               | W7–W8 · Lab 3         | Design    |
| S9    | Agent governance            | Human-in-the-loop boundary, adversarial failure mode, guardrails.                            | W9–W10 · Lab 3        | Design    |
| S10   | Three-phase roadmap         | Stabilise → Automate → Orchestrate (what the company does over 36 months).                   | W11 · Lab 4           | Implement |
| S11   | Value / cost / risk         | Per phase: investment estimate, key risks, success metrics.                                  | W11 · Lab 4           | Implement |
| S12   | Human-AI partnership        | Workforce transition, reskilling, ethics, governance model.                                  | W13                   | Implement |
| S13   | The ask / close             | The investment decision requested of the board.                                              | W11+                  | Implement |

## IE-GY 9113B — Storyboard: how to read and use it

### PURPOSE

The capstone spine. It maps the 14 lessons to the final board presentation so students see the end state from Week 1, and each week's homework produces a defined piece of the final deck. It also serves as the deliverables-to-project map: every graded deliverable is tagged to its origin — in-class work, homework/teamwork, or lab.

### THE THREE PHASES = EXISTING MILESTONES (not a new framework)

Diagnose → Design → Implement is the plain-language gloss on the course's existing Milestones 1–2–3: M1 'What is the problem?' (W1–W6, Labs 1–2), M2 'What is the design to close it?' (W7–W10, Lab 3), M3 'How do we manage what we built?' (W11–W14, Lab 4 + final). No new construct was invented.

### BOARD-DECK SIZING

Target ~13 content slides for the 20-minute board presentation (~60–90 sec each), plus 5 min Q&A. The slide count mirrors the 7 Board-Memo sections so the deck and the memo are the same argument. Many lessons feed one slide — the storyboard maps lessons-to-slides many-to-one, never one slide per lesson. Choosing what earns a slide is itself the board discipline students practise.

### TWO DIFFERENT THREE-PART STRUCTURES — DON'T CONFLATE

- Project method (this storyboard's spine): Diagnose → Design → Implement — how the TEAM works through the semester.
- Roadmap (inside Milestone 3, slides S10–S11): Stabilise → Automate → Orchestrate — what the COMPANY does over 36 months.
